INTRODUCTION:

These coders are ideal for **On-Line High Speed Coding** on eggs / egg trays moving on conveyor.

There is a simple drag-and-drop editing software that is used to enter the information on the computer, saves it to the memory card, and then the card is put in the machine via USB. The card can store unlimited messages, the machine itself holds 30 messages with a combination of small, medium or large characters along with LOGOs, Objects & Scannable Bar Codes.

The Inking system consists of a simple **disposable pre-mix ink cartridge** using food grade porous inks which is just push fitted into its slot & immediately you can start printing.

The height of the print heads is then adjusted according to the height of the eggs in the trays & when the tray travels on the conveyor, the whole message is spray-printed onto all the eggs at high speed while it is in motion without touching it.

FEATURES:

- These are High-Speed single / multiple pass printers & have a 2.8" Colored Touch Screen Display for setting all parameters.
- Latest technology high speed 128 nozzle, 18 mm XAAR Piezo-jet print head which is very high resolution & gives very high quality of print.
- **These printers are Fully Electronic without CORE System & do not have any air pump, viscosity control unit, filters, etc. & so there is no maintenance required (No AMC). They do not require separate make up or wash solution as everything is included in the disposable ink cartridges making it very user friendly for the Operator. The printing cost is only about 2 paise per impression.**
